

BAMBU Frontend Engineer Test

With API from swapi.co, build a single page application where users can:

1. View all people in the Star Wars universe.
2. View the detail of all the people in the Star Wars universe.

You are given 3 days (72 hrs) to complete the task. Given the time constraint, try your best to write production ready code. Your submission would be reviewed based on these criteria:

1. Performance
2. Code quality
3. Tooling choices

DO NOT copy a solution. We have already collected a list of typical solutions online. If we found your work is exactly same with some of them, we may have to terminate the review process.

To submit your work, send us the link of the GitHub repository containing the required source to us and we are willing to have a look on how you build the system step by step. Good luck!
